

SMART CITIES.

UNIFIED DUCT

INFRASTRUCTUR

E

& OPEN ACCESS

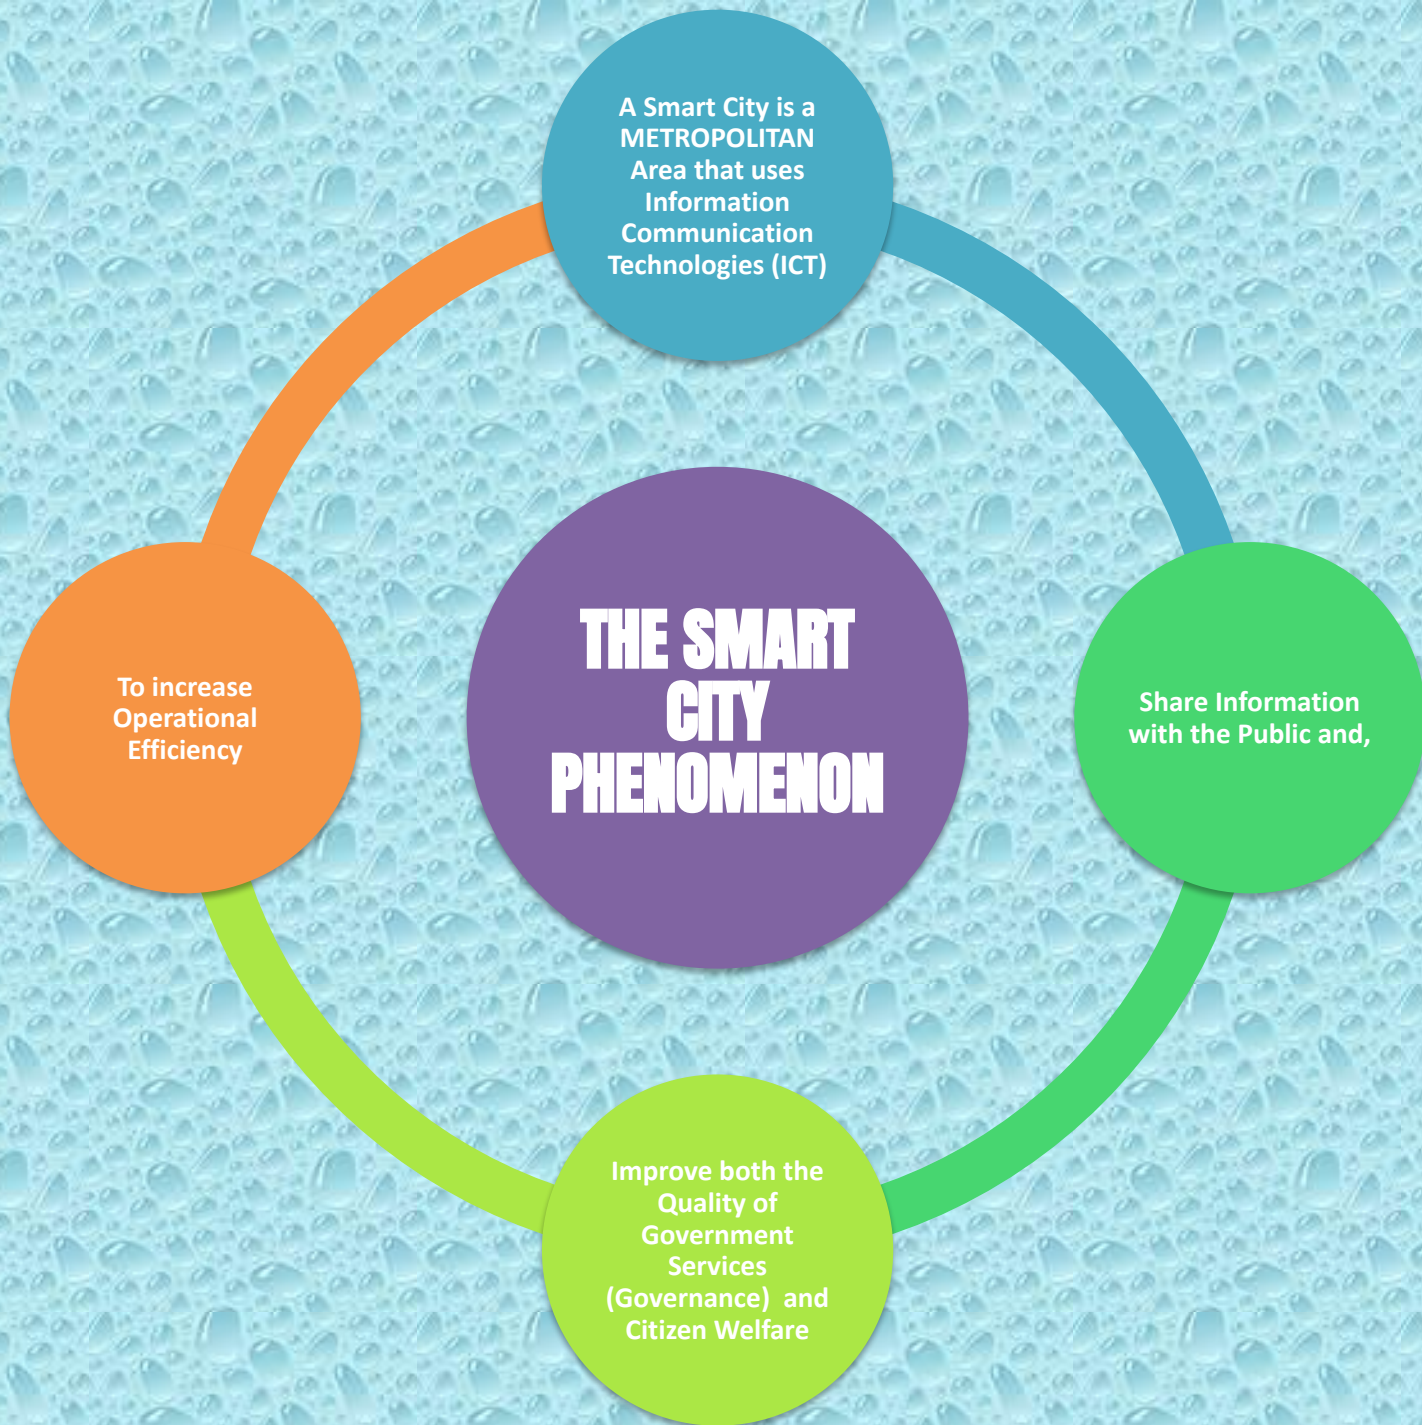

PROTOCOL:

- ❖ **His Excellencies, Permit me to stand on existing Protocol please.**
- ❖ **Distinguished guests, ladies and gentlemen.**

❖ I wish to express my sincere appreciation for this honour to speak at this year's Nigeria Peering and Interconnection Forum, on the topic; **'SMART CITIES, UNIFIED DUCT INFRASTRUCTURE & OPEN ACCESS'**.

THE COMPONENTS OF A SMART CITY

A Smart City is a METROPOLITAN Area that uses Information Communication Technologies (ICT)

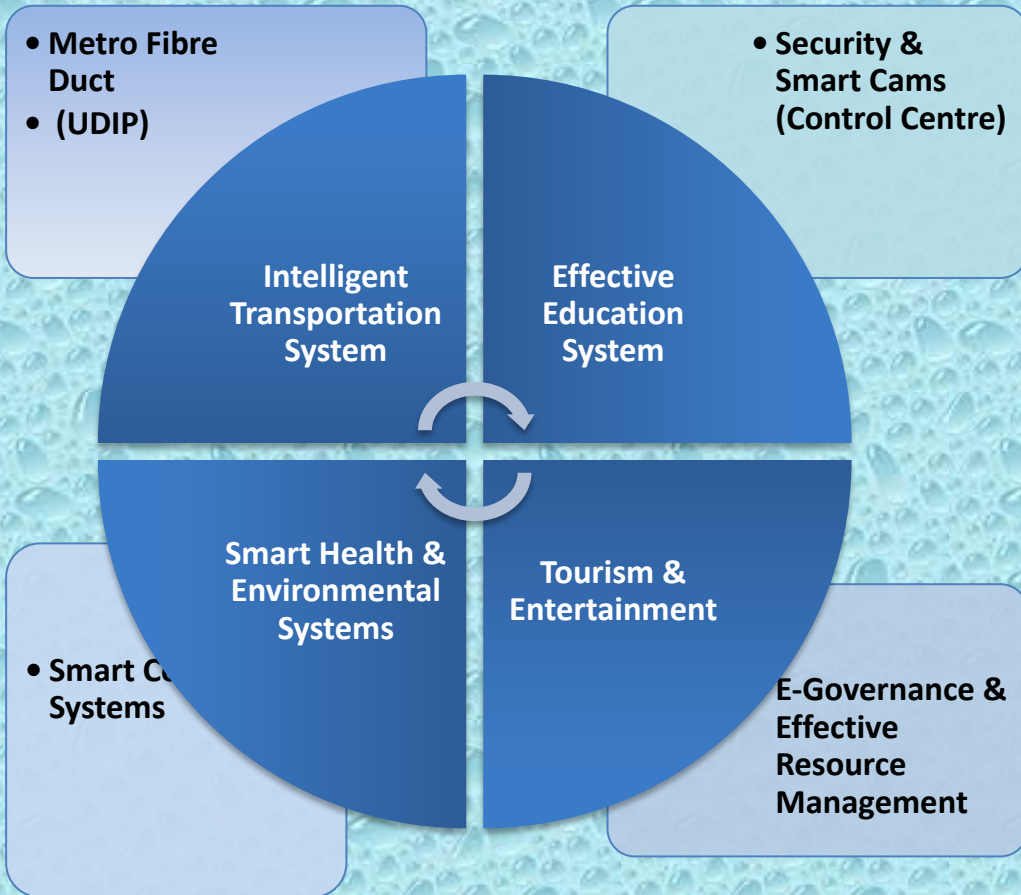

THE SMART CITY PHENOMENON

Share Information with the Public and,

Improve both the Quality of Government Services (Governance) and Citizen Welfare

To increase Operational Efficiency

The Smart City In The THEMES AGENDA

WHAT CHARACTERISES THE SMARTNESS OF A CITY?

An infrastructure based around Technology

Environmental initiatives

People able to live and work within the city, using its resources

Effective and highly functional Public Transportation

Confident and progressive city plans

KEY INDICATORS OF A SMART CITY TRANSFORMATION

USE OF
INFORMATION
AND
COMMUNICATION
TECHNOLOGIES

BUILDING AND
CONTROL
AUTOMATION

EFFICIENT
URBAN
PLANNING

URBAN
MOBILITY AND
SUSTAINABLE
PUBLIC
TRANSPORT

SMART WASTE
MANAGEMENT

IMPROVING
ENVIRONMENTAL
SUSTAINABILITY

CONCERN FOR THE
SOCIAL
ENVIRONMENT

TECHNOLOGIES
APPLIED TO
EDUCATION

HEALTH
TECHNOLOGIES &
ADVANCED
E-COMMERCE
SYSTEM

THE NEED FOR OPEN ACCESS

Open access means the creation of competition in all layers of the network allowing a wide variety of physical networks and applications to interact in an open architecture

Open access regulation : this refers to the mandated or voluntary provision of access to an upstream resources which must be based on the principle of non-discrimination

Simply anyone can connect to anyone in a technology-neutral framework that encourages innovative, low-cost delivery to users. It encourages market entry from smaller, local companies and seek to prevent any single entity from becoming dominant

Open access regulation usually refers to the network layer, but may also be applied to other layers of the OSI model. The network layer decides which physical path the data will take.

"OSI- Open System interconnection"

OPEN ACCESS, NETWORK PROVIDERS AND REGULATORS

Regulators may consider mandating dominant providers of national broadband networks, including cable landing stations, to provide open access on a fair and non-discriminating basis to their network and essential facilities for competitors at different levels of network

“cable landing stations are the electronic communication facilities, including where applicable, collocation space on or within ducts, cable trays, conduits and beach joints which connects to an electronic communication facilities”

Few things to consider before implementing open access:

The relevant market must be defined, SMP status must be established i.e. the status of the multiple processor, operating system and memory

“SMP: symmetric multiprocessing is a computer processing done by multiple processors that share a common operating system and memory”

CONCLUSION

- Ultimate objective of smart city systems

Governance & resource management

Policy & regulations

Resource
planning

Population and
demographics

Geospatial data
systems

Comprehensive
data management
system

CITY PLANNING, MANAGEMENT AND OPERATION

- ❖ **An integrated Data Base Management System (DBMS)**
- ❖ **Consistent, EFFICIENT and Effective resource Management**

THANK YOU
